Fidelity® Contrafund®

Key Takeaways

- In 2023, the fund's Retail Class shares gained 39.33%, handily topping the 26.29% advance of the benchmark, the S&P 500® index.
- Portfolio Manager Will Danoff says the U.S. stock market was surprisingly strong in 2023 because economic fundamentals were better than expected, inflation fell meaningfully, and the economy and corporate earnings did not collapse.
- Against this backdrop, Will followed his long-held investment tenet that a stock's price follows the actual and expected earnings per share of the underlying company over time.
- The fund's allocation to the communication services sector was 9.03 percentage points greater than the benchmark this year, on average, and, along with stock picks here, was by far the largest contributor to the portfolio's performance versus the benchmark.
- The top individual contributor by a wide margin was longtime holding Meta Platforms. Meta's shares rose 194% – almost tripling – this year, as the company's 2023 earnings increased an estimated 67% and its price-earnings ratio more than doubled from a year ago.
- In a year when the fund outperformed the benchmark by 1,304 bps, detractors were fairly insignificant, Will notes. Shares of longtime and top-10 holding UnitedHealth Group were roughly flat for the year, and therefore cost the fund 115 bps of relative performance.
- As of year-end, Will has a favorable view of the market, as inflation has moderated, interest rates have fallen and corporate earnings have grown. He believes management teams are controlling expenses and maintaining discipline when spending and planning for acquisitions.
- The much-touted artificial intelligence boom should fuel another leg of growth for tech companies and likely produce efficiency gains for many non-tech companies, according to Will.

MARKET RECAP

U.S. equities gained 26.29% in 2023, according to the S&P 500® index, as a slowing in the pace of inflation and resilient late-cycle expansion of the U.S. economy provided a favorable backdrop for higher-risk assets for much of the year. After returning -18.11% in 2022, the index's sharp reversal was driven by a narrow set of firms in the information technology and communication services sectors, largely due to excitement for generative artificial intelligence. Monetary tightening by the U.S. Federal Reserve continued until late July, when the Fed said it was too soon to tell if its latest hike would conclude a series of increases aimed at cooling the economy and bringing down inflation. Since March 2022, the Fed has raised its benchmark interest rate 11 times before pausing and three times deciding to hold rates at a 22-year high while it observes inflation and the economy. After the Fed's November 1 meeting, when the central bank hinted it might be done raising rates, the S&P 500® reversed a three-month decline due to soaring yields on longer-term government bonds and mixed earnings from some big and influential firms. Favorable data on inflation provided a further boost and the index rose 14% in the final two months. By sector for the year, tech (+61%) and communication services (+56%) led the way, followed by consumer discretionary (+43%). In contrast, the defensive-oriented utilities (-7%) and consumer staples (+1%) sectors notably lagged, as did energy (-1%), hampered by lower oil prices.

Investment Approach

- Fidelity® Contrafund® is an opportunistic, diversified equity strategy with a large-cap growth bias.
- Philosophically, we believe stock prices follow companies' earnings, and those companies that can deliver durable multiyear earnings growth provide attractive investment opportunities.
- As a result, our investment approach seeks firms we believe are poised for sustained, above-average earnings growth that is not accurately reflected in the stocks' current valuation.
- In particular, we emphasize companies with "best of breed" qualities, including those with a strong competitive position, high returns on capital, solid free-cash-flow generation and management teams that are stewards of shareholder capital.
- We strive to uncover these investment opportunities through in-depth bottom-up, fundamental analysis, working in concert with Fidelity's global research team.

Q&A

An interview with Portfolio Manager William Danoff

Q: Will, how did the fund perform in 2023?

The fund's Retail Class shares gained 39.33%, handily topping the 26.29% advance of the benchmark, the S&P 500® index, and outpacing the peer group average. I am pleased with the fund's performance this year, but the better showing follows a disappointing 2022.

Q: Would you please reflect on the developments and market dynamics of 2023?

The U.S. stock market was surprisingly strong in 2023 because economic fundamentals were better than expected. Inflation fell meaningfully, and the economy and corporate earnings did not collapse. U.S. inflation, as measured by the Consumer Price Index, improved from 6.5% in December 2022 to 3.4% at the end of 2023. Contributing factors included declining shipping costs, lower commodity prices and a cooling of the global economy, driven by the Federal Reserve's monetary tightening through late July.

While U.S. interest rates ended the year flat at 3.88%, they closed well below the peak of almost 5% in October. The fourth-quarter rally in bonds, propelled by lower inflation and the Fed's signaling that it would not raise rates further, powered the S&P 500® to a 14.09% gain in the final two months of the year. Earnings for companies in the S&P 500® rose modestly to an estimated $222 in 2023, up from $219 in 2022, despite earnings for the energy sector falling from $23 to $16.50. With lower interest rates expected to stimulate economic growth in 2024, earnings estimates for the index are $250 this year, up a strong 12.6%. Thus, with the S&P 500 closing the year at 4,770, the market is trading at 19 times the 2024 estimate. Many of the top names in the S&P 500 have experienced earnings multiple expansion in 2023, so earnings must continue to grow for the market to move higher, in my opinion.

Q: As the year unfolded, did you make any notable changes to the fund's positioning?

I did not trade the fund's top positions that much this year. As of year-end, the fund's top-13 positions consisted of the same companies as of the end of 2022, but the order and weightings have modestly changed due to performance.

As long-term shareholders know, I believe that stock prices follow the earnings per share of the underlying companies, so I slightly trimmed some positions when earnings growth was slowing or below expectations, and I added to some holdings when long-term prospects were improving and earnings estimates were rising. The biggest pruning was to the fund's large overweight in managed health care and insurance giant UnitedHealth Group (+1%), which is well-positioned but has not grown as fast as other companies outside of the health care sector. Nonetheless, UnitedHealth was a sizable holding and overweight as of year-end.

Elsewhere, I maintained a large commitment to the communication services sector, which includes Facebook and Instagram parent Meta Platforms (+194%), the fund's top position and overweight at the end of the year, and Google-parent Alphabet (+59%). The fund's allocation to communication services stocks was 9.03 percentage points greater than the benchmark this year, on average, and ended the year at 11.13 percentage points higher because the sector made a strong advance in 2023, driven by Meta and Alphabet.

In contrast, I deemphasized the defensive-oriented consumer staples, which was underweight by 4.13 percentage points, on average, for the year. This contributed 180 basis points to the fund's relative result because the sector gained only 1% in the benchmark, held back by weaker pricing than last year and earnings multiple compression due to higher rates.

As I noted, the fund's largest sector overweight was communication services, which rose 56%. The fund's sizable overweight here, along with my stock picks, boosted relative performance by 901 bps – that's 69% of the fund's outperformance of the benchmark for the year.

The other sectors that helped relative performance were health care, where stock selection drove a relative advantage of 168 bps, and utilities, where security selection and an underweight added 109 bps for the year.

Q: Which individual stocks helped most?

The top individual contributor by a wide margin was longtime holding Meta Platforms. Meta's shares rose 194% – almost tripling – this year, as the company's 2023 earnings increased an estimated 67% and its price-earnings ratio more than doubled from a depressed level a year ago. Expectations were very low for Meta in November 2022, after the company's earnings and revenue contracted in the third quarter of 2022; the stock returned -64% in 2022.

Since then, management cut almost 25% of its workers, and revenue rose faster than expected, as Meta's embrace of artificial intelligence improved both user engagement and advertising efficacy. The combination of lower expenses and higher revenue produced much-better-than-expected earnings. Meta has 3.6 billion daily users of its family of apps, which, based on our research, represents an astounding 70% of all of the world's adults outside of China. This scale will be highly valuable in the years to come.

Two other big contributors in 2023 were chipmaker Nvidia (+239%) and Amazon.com (+81%). Their stories were similar to Meta's. Both companies produced much-better-than-expected earnings growth for the year, and their stocks handily topped the benchmark. Nvidia's graphics processing units are powering the AI wave, and its revenue doubled in the July quarter and tripled in the October quarter. Amazon reconfigured its fulfillment network in the U.S., which has lowered costs and increased delivery speed this year, boosting EPS estimates by 25% in 2023.

Q: How about noteworthy detractors?

In a year when the fund outperformed the benchmark by 1,304 bps, detractors were fairly insignificant, but still can be instructive. Shares of longtime and top-10 holding UnitedHealth Group, the leading provider of health care services in the U.S., were roughly flat for the year, and therefore cost the fund 115 bps of relative performance. UnitedHealth grew EPS 14% and generated an outstanding 25.5% return on equity in 2023, but still fell short of expectations at the beginning of the year and therefore suffered valuation compression.

Similarly, Berkshire Hathaway executed well but its shares rose only 15%, costing the fund 85 bps of relative performance for the year. Berkshire's EPS increased by more than 20%, as its insurance business exceeded expectations, but its valuation declined as investors chased tech and other more-speculative stocks. Berkshire is our No. 2 holding and overweight as 2024 begins, and I believe that it will generate at least a market-like return but with significantly less risk over time.

In consumer discretionary, the fund's underweight in Tesla, which rose 102% in 2023, cost the fund 82 bps versus the benchmark. Tesla increased its car production by an impressive 35% in 2023, but its profit margin fell sharply and EPS fell by more than 30%. Thus, the market is anticipating that Tesla can leverage its technology leadership and produce strong earnings growth in the next five years, as the stock is priced at an optically expensive 50 times 2025 estimates, or more than two and a half times the general market's valuation.

Q: Will, what is your outlook as of year-end?

My view of the market is favorable. Inflation has moderated, interest rates have fallen and corporate earnings have grown. Management teams are controlling expenses and maintaining discipline when spending capital and planning for acquisitions.

The much-touted artificial intelligence boom should fuel another leg of growth for tech companies, and likely produce efficiency gains for many non-tech companies. AI, which a friend refers to as "augmented intelligence," is a remarkable technology that should make everyone more productive. It could help humanity solve many of the world's challenges, such as the many untreatable diseases that afflict people across the globe.

Looming concerns for stocks include the rising U.S. federal deficit, which could boost interest rates and force tax rates to rise in the long term, and the escalation of global geopolitical tension, which could increase supply-chain and commodity costs over time. Globalization, lower taxes and falling interest rates have been tremendous tailwinds for stocks since I took over Contrafund in 1990. If these megatrends reverse, the stock market could stagnate. But well-positioned and well-managed individual companies would still prosper, as I see it. Working with the Fidelity research department, I am confident that I can continue to identify long-term winners in the market. ■

Portfolio Manager Will Danoff remembers the late Charlie Munger of Berkshire Hathaway:

"Charlie Munger, vice chairman of longtime fund holding Berkshire Hathaway, passed away in November. My colleagues and I met with Charlie twice when he was lead director of another longtime fund holding, Costco Wholesale, and once at a friend's dinner party, in the past 10 years. In addition, we were in the front row listening intently to his wisdom and good humor at many Berkshire annual meetings.

"Investors can learn a remarkable amount from Charlie's generously shared wisdom. He famously helped his partner, Warren Buffett, shift his investment approach from 'buying fair businesses at wonderful prices' to 'buying wonderful businesses at fair prices.' In other words, in the long run the quality of the business trumps how cheaply the buyer acquires the asset.

"Charlie, like Warren, frequently spoke about working hard to 'expand your circle of competence' (keep learning) and to stay within that circle. Charlie, despite his brilliance, also spoke of having only one new, actionable idea every two years or so. By maintaining a very high bar for new ideas, thinking rationally about the merits of them and being disciplined about the price you pay for them, Charlie espoused an investing approach that is decidedly different from the high-turnover, 'find the current hot trend' speculative approach that many market participants practice today.

"In other words, he advocated buying well-positioned businesses at a reasonable price and holding them for the long term.

"Charlie was also keen on upholding one's reputation, and investing with management teams you could trust. He lauded Costco's management for always acting in the best interests of its customers and employees. He encouraged my colleagues and me to not 'sup with the devil,' or be tempted to do wrong. I am grateful for the time Charlie Munger shared with my colleagues and me, and I am inspired by his excellent example when managing Contrafund. He will be greatly missed."

Total returns are historical and include change in share value and reinvestment of dividends and capital gains, if any. Cumulative total returns are reported as of the period indicated. **Please see the last page(s) of this Q&A document for most-recent calendar-quarter performance.**

Definitions and Important Information

Information provided in, and presentation of, this document are for informational and educational purposes only and are not a recommendation to take any particular action, or any action at all, nor an offer or solicitation to buy or sell any securities or services presented. It is not investment advice. Fidelity does not provide legal or tax advice.

Before making any investment decisions, you should consult with your own professional advisers and take into account all of the particular facts and circumstances of your individual situation. Fidelity and its representatives may have a conflict of interest in the products or services mentioned in these materials because they have a financial interest in them, and receive compensation, directly or indirectly, in connection with the management, distribution, and/or servicing of these products or services, including Fidelity funds, certain third-party funds and products, and certain investment services.

FUND RISKS

The value of the fund's domestic and foreign investments will vary from day to day in response to many factors. Stock values fluctuate in response to the activities of individual companies, and general market and economic conditions. Investments in foreign securities involve greater risk than U.S. investments. You may have a gain or loss when you sell your shares.

IMPORTANT FUND INFORMATION

Relative positioning data presented in this commentary is based on the fund's primary benchmark (index) unless a secondary benchmark is provided to assess performance.

INDICES

It is not possible to invest directly in an index. All indices represented are unmanaged. All indices include reinvestment of dividends and interest income unless otherwise noted.

S&P 500 Index is a market capitalization-weighted index of 500 common stocks chosen for market size, liquidity, and industry group representation to represent U.S. equity performance.

Consumer Price Index is a widely recognized measure of inflation calculated by the U.S. government.

MARKET-SEGMENT WEIGHTS

Market-segment weights illustrate examples of sectors or industries in which the fund may invest, and may not be representative of the fund's current or future investments. They should not be construed or used as a recommendation for any sector or industry.

RANKING INFORMATION

 The Morningstar information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or redistributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Fidelity does not review the Morningstar data and, for mutual fund performance, you should check the fund's current prospectus for the most up-to-date information concerning applicable loads, fees and expenses.

% Rank in Morningstar Category is the fund's total-return percentile rank relative to all funds that have the same Morningstar Category. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. The top-performing fund in a category will always receive a rank of 1%. % Rank in Morningstar Category is based on total returns which include reinvested dividends and capital gains, if any, and exclude sales charges. Multiple share classes of a fund have a common portfolio but impose different expense structures.

RELATIVE WEIGHTS

Relative weights represents the % of fund assets in a particular market segment, asset class or credit quality relative to the benchmark. A positive number represents an overweight, and a negative number is an underweight. The fund's benchmark is listed immediately under the fund name in the Performance Summary.

Manager Facts

Will Danoff joined Fidelity as an equity research analyst in 1986, after graduating from the Wharton School of the University of Pennsylvania. He covered the retail industry and managed the Fidelity Select Retailing Portfolio from 1986 to 1989.

Mr. Danoff served as the portfolio assistant for the Magellan Fund in 1989 and 1990, before being asked to manage the Fidelity Contrafund in September 1990. The fund is the largest solely managed active equity mutual fund in the world. Contrafund strategies1 have more than $172 billion in assets.

Mr. Danoff started Fidelity Advisor New Insights Fund in 2003, which has grown to $16 billion. He currently comanages the fund with Nidhi Gupta. He started Fidelity Series Opportunistic Insights Fund in 2012, which has grown to $8 billion.

In addition, Mr. Danoff resumed management of the $18 billion Fidelity VIP Contrafund in May 2018, a portfolio he launched in 1995 before handing off to colleagues in 2007. He co-manages that fund with Jean Park.

Mr. Danoff also manages Fidelity Insights Class, 2 Fidelity U.S. Equity, 3 and co-manages Fidelity Global Growth & Value Class2 with Joel Tillinghast. These strategies were launched in January 2017, May 2018, and June 2018, respectively, and have grown to over $11 billion in aggregate.

Morningstar named Mr. Danoff "Domestic Stock Manager of the Year"4 in 2007.

All data related to assets managed is as of 10/31/2023 unless otherwise noted.
1. Contrafund strategies include Fidelity Contrafund, Fidelity Contrafund K6, and the Fidelity Contrafund Commingled Pool.
2. Only available to Canadian Investors.
3. Only available to Japanese Investors.
4. Established in 1988, the Morningstar Fund Manager of the Year award recognizes portfolio managers who demonstrate excellent investment skill and the courage to differ from the consensus to benefit investors. To qualify for the award, managers' funds must have not only posted impressive returns for the year, but the managers also must have a record of delivering outstanding long-term performance and of aligning their interests with shareholders'. The Fund Manager of the Year award winners are chosen based on Morningstar's proprietary research and in-depth evaluation by its fund analysts.
