## New Features

### 1) Navigational Tabs

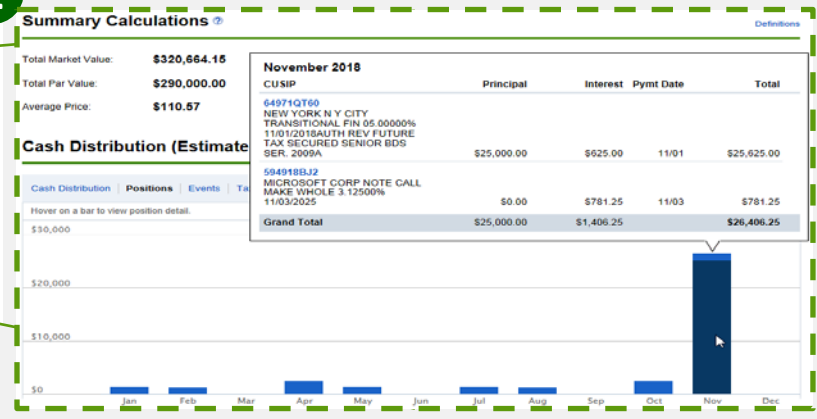

Use the new tabs in the Cash Flow Calculations section to easily navigate between cash flow charts.

- Select the **Positions** sub-tab to view expected principal and interest payments for bond & CD positions.
- The chart defaults to the **annual** view. Click on the bar of a year to review **monthly** detail.

### 2) Position Detail

Hover on a bar to view **position** details to view CUSIP level information including

- expected principal and interest payments
- payment date
- total details across CUSIP and for the month.

In general, the bond market is volatile, and fixed income securities carry interest rate risk. (As interest rates rise, bond prices usually fall, and vice versa. This effect is usually more pronounced for longer-term securities). Fixed income securities also carry inflation risk, liquidity risk, call risk and credit and default risks for both issuers and counterparties. Lower-quality fixed income securities involve greater risk of default or price changes due to potential changes in the credit quality of the issuer. Foreign investments involve greater risks than U.S. investments, and can decline significantly in response to adverse issuer, political, regulatory, market, and economic risks. Any fixed-income security sold or redeemed prior to maturity may be subject to loss.
