## Important Information

The Bond Ladder tool is an educational tool and is not intended to serve as the primary basis for your investment or tax decisions. The results of the tool are based on your inputs and criteria and the tool's stated methodology.

In general, the bond market is volatile, and fixed income securities carry interest rate risk. (As interest rates rise, bond prices usually fall, and vice versa. This effect is usually more pronounced for longer-term securities). Fixed income securities also carry inflation risk, liquidity risk, call risk, and credit and default risks for both issuers and counterparties. Lower-quality fixed income securities involve greater risk of default or price changes due to potential changes in the credit quality of the issuer. Any fixed income security sold or redeemed prior to maturity may be subject to loss.

( -- ) is used to indicate Not Available.

<sup>1</sup>Summary calculations and data shown are the result of mathematical calculations and are intended to be hypothetical illustrations intended for informational purposes only.

All averages are weighted according to the face amount. Individual bonds are subject to price change and availability. Yield and market value will fluctuate so that your bond, if sold prior to maturity, may be worth more or less than original cost.

The cash flows displayed above are only estimates. Your actual income and principal payments may be higher or lower than these estimates. Estimates of income and principal payments should not be relied upon for making investment, trading or tax decisions.

<sup>2</sup>For an existing position, estimated cost represents the positions market value.

Please note that the dollar values in the Estimated Cost column and in subsequent calculations displayed under Summary Calculations are inclusive of accrued interest and estimated concessions and fees.

Individual bonds are subject to price change and availability.

The investments listed in the ladder results have been identified based on information which you have made available to us, and represent possible investment alternatives available to you at the time this list was compiled. As with all your investments through Fidelity, you must evaluate and confirm that your investments are consistent with your investment objectives, level of risk tolerance and financial situation. Fidelity is not recommending or endorsing any of these securities by making them available to its customers.
